

**VRide
Installation Procedure
Rev 1 (7/11/2006)**

Hardware Included:

3M re-closeable washers (12)

Tools Required:

Phillips screwdriver

Procedure for Back Seat Cover Installation:

1. Remove 10 phillips head screws from back seat and replace using 3M re-closeable lock washers (see Figure 1)
2. Place back set cover over and around the back seat and affix to the re-closeable lock washers.
3. Tuck the bottom of the back seat cover into the bottom cushions (see Figure 1).

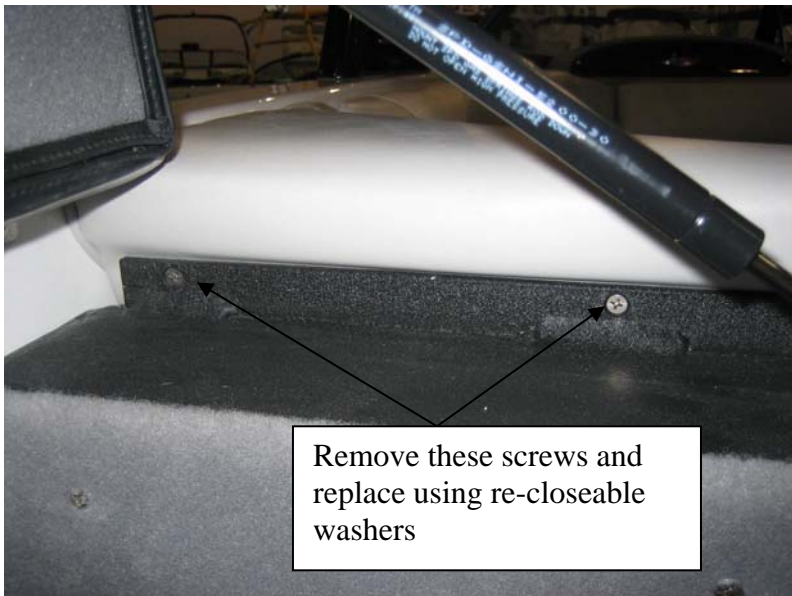

Figure 1. Location of back seat screws (10 each)

Figure 2. Back Seat Center cover fully installed.

Procedure for Installation of Driver Seat Covers:

1. Place the flip seat in the up position.
2. Remove screws from the bracket holding down the inner seat cushion. This cushion should now be removable. Install D2 by simply placing it over the cushion and place back onto the seat without the bracket.
3. Find the driver cover labeled “D1”. This piece covers the flip up seat. Install so that the “pouch” faces the steering wheel direction and wraps from top to bottom.
4. D3 is a wrap for the driver seat back. Tuck in the end without elastic loops into the bottom seat cushion. The wrap should go up and over the driver seat back. Hook the elastic loops around the bolts that extend under the driver’s chair.
5. D4 is a full shroud cover. Slide the cover into place. Tuck in the inner edge into the bottom seat. The outer edges should be concealed by the elastic. (see Figures 3 and 4)

Figure 4. Driver seat side view. Picture shown without elastic on bottom edge.

Procedure for Installation of Remaining Seat Covers:

1. Match the seat cover number with the list below.
2. Remove cushion and install seat cover around edges. In some cases there are elastic straps that are designed to wrap around rectangular blocks on the bottom side of the seat cushion. Be sure to use these straps, as they will make the cover fit more closely.
